Please pay attention to all the people who have begged you to do the most logical thing and NOT allow Lightsquared to use the frequency adjacent to GPS frequencies. We use GPS on our farm to save on fuel, overapplication of chemicals and fertilizers, and achieve greater efficiencies in the use of our time and other inputs. In addition, the use of mapping individual fields helps add a extra layer of protection of our waterways by ensuring accidental application of fertilizers and chemicals of any kind does not happen there. The degradation of the frequency availability would decimate the investment we and others have made in GPS equipment on our farm and across all spectrums of applications that use GPS. Please listen to the people who overwhelmingly oppose this. Most of the actually live in areas which Lightsquared will bring high speed connections and they don't even want it. It goes to show what people would choose. Pay attention.
